cms range helix beam saws

CMS is part of the SCM Group, a world leader in technologies for processing a wide range of materials: wood, plastics, glass, stone, metal and composite materials. The companies of the Group are the reliable partners of established industries operating worldwide in various trade sectors: from furniture to building, from automotive to aerospace, from boating to plastic materials. Scm Group coordinates, supports and develops a system of industrial outstanding realities, organized into 3 large highly-specialized production sites in Italy, with over 4,000 employees and a direct present in the 5 continents.

SCM Group represents the most advanced skills in the design and construction of machines and components for industrial processing worldwide.

CMS SpA manufactures machinery and systems for the machining of composite materials, carbon fibre, aluminium, light alloys, plastic, glass, stone and metals. It was established in 1969 by Mr Pietro Aceti with the aim of offering customized and state-of-the-art solutions, based on the in-depth understanding of the customer's production needs. Significant technological innovations, originating from substantial investments in research and development and take-overs of premium companies, have enabled constant growth in the various sectors of reference.

CMS Advanced Materials Technology is a leader in the field of numerically controlled machining centers for the working of advanced materials: composites, carbon fibre, aluminum, light alloys and metal. Substantial investiments in research and development have allowed the brand to always be on the forefront of cutting-edge design, with machines that ensure best-inclass performance in terms of accuracy, speed of execution, and reliability; meeting the needs of customers operating in the most demanding divisions. Since the early 2000's, CMS Advanced Materials Technology has established itself as a technology partner in areas of excellence such as aerospace, aviation, automotive, race boating, Formula 1, and the most advanced railway industry.

HELIX LTECHNOLOGICAL BENEFITS

Prismatic guide on the pressure beam ensures a fast and uniform cycle and a long service life.

KEY BUYER BENEFITS

- + Single-blade beam saw managed by PC/PLC control dedicated to cutting sheets; **high performance**, **essential and flexible**, with **advanced technical solutions** and an incomparable **performance/price ratio**. Average **3% reduction** on purchasing price calculated on cutting phase, compared with the standard saws on the market.
- + Ideal for small companies or as an auxiliary machine for other advanced materials and plastic processing technologies.
- + The beam saw can be **easily integrated with an automatic** horizontal magazine of plastic sheets (available on request).

Toothed belt Transmits maximum power with low levels of vibration and abrasion.

New blade carriage for easy inspection and maintenance.
With maximum power up to 18 kW.

Technical Data		Helix L 60	Helix L 80	Helix L 95
Cutting length	mm		3300 / 3800 / 4300)
Blade projection	mm	60	80	95
Saw carriage variable speed (option)	m/min (option)		6 - 60 (0 - 120)	
Pusher variable speed (option)	m/min (option)		60 (70)	
Main blade motor power (S6-40%) 50 Hz (stardelta-start) (option)	kW (option)		7,5 (9) (11)	
Motor power with inverter (option)	kW (option)	(9) (11)	(9) (11) (15)	(9) (11) (15) (18)

Scorer rotating speed – 50 Hz	rapm		5850	
Main blade diameter	mm		370	
Scorer blade diameter	mm		200	
Number of clamps	std		5	

HELIX 90m / 110m TECHNOLOGICAL BENEFITS

KEY BUYER BENEFITS

helix 90m

- + Single-blade beam saw specifically designed for cutting advanced and plastic materials.

 Capable of meeting all the specific needs of companies that process plastic, acrylic and synthetic panels.
- + Direct control of specific cutting parameters for **maximum flexibility in cutting.**Directly available from control board: blade speed adjustment, optimized blade ascent, main blade cooling and tool lubrication.
- + Selective air curtain work surfaces dedicated to plastic materials. Capable of ensuring excellent sliding of the sheets, only where needed. A substantial help to the operator in the management of semi-finished sheets. Less than 9% of time in sheet management.

Dedicated presser:

The sturdy structure of the presser equipped with an aluminium bottom plate prevents thin materials from vibrating during cutting operations, so as to guarantee maximum precision and finishing quality. The enhanced suction capability ensures total cleanliness of the worktable.

Floating collets: guarantee of excellent results The special shape of the collets allows the safe gripping of sheets and panels, at maximum speed and with perfect parallelism even on surfaces that are not perfectly flat.

Blade cooling and lubrication

Optimization of cutting quality and possibility to choose from the control whether to cool the blade or spray an air/oil mist.

Technical Data		helix 90m	helix 110m
CUTTING DIMENSIONS	mm	3200 3800 3800 4500	x2100 x3200 x3200 x3800 x3200 x4300

HELIX 130h TECHNOLOGICAL BENEFITS

KEY BUYER BENEFITS

+ Superior cutting carriage technology thanks to the "HI TRONIC Vertical stroke DEVICE". The complete electronic control of the blades provides incomparable standards of finish and speed in the work cycles when cutting advanced and plastic materials.

+ Fast and easy tool change.

In few seconds the "SAW-SET" device performs a **quick and precise tool setting** thanks to the electronic adjustment and enables easy machine operations and increase in productibity. Less than **15% of time** in setting operations.

+ Maximum working cleanliness thanks to the automatic closing of the cutting line in order to prevent trimmings from falling into the machine compartment.

Presser: manifold qualities in a single structure

The structure guarantees uniform pressure and optimal suction of chips with the triple dust conveyor system (one above on the press bar, one below on the blade holder carriage and one on a side support).

Absence of maintenance thanks to the movement of the presser on prismatic guides.

Brushless motor plunger: consistently high performance

The best quality and maximum working speed owing to to the plunger stroke on ground round guides.

Machine worktable made of sturdy tubular steel with castor wheels, ideal solution to handle even the heaviest sheets without any damage.

Inverter: no compromise in plastics processing

The possibility to adjust the speed of the main blade is the fundamental condition that allows obtaining a superior cutting quality in the processing.

Technical Data		helix 130h
CUTTING DIMENSIONS	mm	3200x3200 3800x3800 4500x4300
Blade projection	mm	128
Main blade / engraver blade diameter	mm	430/200

HELIX 130k / 165k TECHNOLOGICAL BENEFITS

KEY BUYER BENEFITS

- + Single-blade beam saw managed by PC/PLC control dedicated to the cutting of advanced materials and plastic sheets and characterized by an especially **rigid and stable** structure, **+19% on thickness** of workable pieces. **Ideal solution in state-of-the-art industrial environments and for the toughest applications.**
- + Main blade motor available with powers up to 37kW.

helix 130k

+ Best-in-class plunger, characterized by maximum linearity, precision and cyclic speed thanks to the high return speed (up to 135 m/min).

Presser: manifold qualities in a single structure

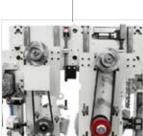

The mechanical structure ensures a higher and more uniform pressure with optimal chips suction and easy maintenance.

Particularly useful conditions in the processing of sheets made of plastic and advanced materials, even of high thickness.

Floating double-claw collets:

Safe gripping at maximum speed on the square side, also with non-perfectly flat sheets of plastic material.

Sturdy blade carriage with independent pneumatic lifting of the main blade and engraver on ball recirculation prismatic guides.

Technical Data helix 130k helix 165k **CUTTING DIMENSIONS** 3200x3200 mm 3800x3800 4500x4300 130 Blade projection 165 mm Main blade / engraver blade diameter 430/200 530/200 mm Maximum blade carriage speed 170 m/min 135 Max plunger speed m/min kW Blade motor power c/inverter (optional compulsory) 15 (opz. 18, 22, 30, 37) 18 (opz. 22, 30, 37) Engraver motor power kW 1,8 Engraver rotation speed (50 Hz) rpm 1.000/2.950 Blade rotation speed c/Inverter rpm 1.200/3.800 First 4 double-claw, Number of colletsstd std double claw then single-claw

Maestro active cut

Maestro active is the new operator interface software which has been unified across all CMS technologies. A single operator can easily and confidently run multiple machines due to controller and interface consistency: regardless the machine, Maestro active maintains the same look&feel, with many identical icons and navigation buttons, thus ensuring the same approach to interaction.

EASE OF USE

The new interface has been specifically designed and optimized for immediate use via touch screen. Graphics have been redesigned for simple and comfortable navigation, with tablet-like icons on touch screen controller.

"ZERO" ERRORS

Improved productivity thanks to integrated help and recovery procedures that reduce the possibility of error from the operator's side.

TO EACH HIS OWN OPTIMIZATION

SOFTWARE

Maestro pattern office is the standard optimization program for all CMS machines. Maestro optiwise is the professional software for controlling the entire costing and optimization process of the beam saw.

ADDITIONAL FUNCTIONS

Maestro pattern office

Maestro pattern office is the office version of the standard optimization program for all CMS machines. Maestro pattern office is the result of the integration between Maestro pattern - the standard optimization program on all CMS beam saws controls — and Maestro pattern import.

Maestro optiwise

Maestro optiwise is the professional software supplied by CMS for beam saws management. The main strengths are:

- Improved user experience: The user can easily and effectively carry out all raw material optimization operations.
- Increased efficiency: Improved user-experience enables required tasks to be performed in less time, increasing productivity
- Less effort for customization: the application is designed with a modular architecture
 that allows it to be easily adapted to each customer's production logic.
- Faster user learning: The application is a useful and simple tool that allows users to be productive in the shortest possible time.
- Multi-machine management: The application is able to manage optimizations and create machine programs for single-blade panel saws and angular systems.

Maestro converter cut

Maestro converter cut is the module that allows to integrate any type of cutting optimization programs with CMS beam saws through PTX file (minimum release 1.14).

Maestro active cut

A REVOLUTIONARY APPROACH TO INTERACT WITH YOUR CMS MACHINE

Factory

FULL CONTROL OF PRODUCTION PERFORMANCES

The creation of customizable reports by operator, shift, program, forecast period (and much more) allows to monitor, optimize and improve the production performance.

FULL MACHINE AWARENESS AND KNOWLEDGE MANAGEMENT SYSTEM

Maestro active allows to record the times related to setup, maintenance, training and other events, tracing all the activities in a database. The operator's know-how is also stored and made available to other people inside the organization thanks to the possibility to comment and document all production events or notifications.

ORGANIZE YOUR PRODUCTION

Maestro active allows to create different users with different roles and authorizations (e.g.: operator, maintainer, administrator, ...). Any user can only execute the functions whose permissions have been assigned to him. It is also possible to define the work shifts on the machine and then detect activities, productivity and events that occurred in each shift.

OPTIMIZATION FUNCTION ON BOARD MACHINE

Maestro pattern is the linear cutting optimization program for user who wants to optimize cutting patterns with a few simple clicks.

SUPPLEMENTARY MODULES

Maestro pattern import

Maestro pattern import is the optional plug-in module which enables Maestro pattern importing production data directly from an MS Excel file.

Cut editor

Labels printing software, panels editor, editor for Macro machining creation.

Cut utility

Cuts editor for panels de-tensioning: software program that reduces tensions inside the material on longitudinal cuts; additional optimisation functions; off-cuts stock management: identification and automatic insertion of the off-cuts for a future use.

Cut manager

Simulator for cycle time calculation, simulated execution of the cutting diagrams of single or multi orders in 2D mode; priority-based and date-based scheduling of the order; advanced report.

2 1:

DIGITAL SERVICES

TO BE ALWAYS BY YOUR SIDE

Maestro connect

CONNECT YOUR MACHINE AND GAIN ACCESS TO A WORLD OF SERVICES

Connecting your machine through IoT technology Maestro connect will let you subscribe a program of fast-evolving services. You will access a wide range of benefits that even go beyond the machine experience and will support and assist you through the whole life-cycle of your machine.

FASTER SERVICE INTERVENTION AND PROBLEM RESOLUTION

Maestro connect provides real time data and Health Records of the machine also to CMS Service, drastically reducing its troubleshooting time.

WORKING ALWAYS IN PERFECT CONDITIONS

Maestro connect can provide a full kit of sophisticated sensor devices to detect and warn the operator in case of alarming conditions of the machine.

SMART MACHINE

THE ENTIRE MACHINERY FLEET AT YOUR FINGERTIPS

• REAL-TIME MONITORING of the machine status, • INSTANT NOTIFICATIONS on pc, tablet, and components, and performance in term of availability and efficiency.

smartphone when machine alarms occur, allowing you to act timely and avoid additional equipment damages.

SMART MAINTENANCE

PLANNING AND MAINTENANCE: PREVENTION IS BETTER THAN... REPAIRING!

- PLANNING: In the Smart Maintenance section, you can find all the tools you need to plan the maintenance of the entire machinery fleet to
- TROUBLESHOOTING: Thanks to intuitive smart documents, Maestro connect guides the operator in the maintenance activities procedures step by step.
- SERVICE REQUEST: Do you need further support? Open a ticket in one click, and our experts will assist vou.

WARRANTY EXTENSION

Is your machine still under warranty?

You will be able to activate the second year of warranty with facilitated conditions directly via Maestro connec

SMART ANALYTICS

REPORT AND KPI: GET TO KNOW BETTER YOUR MACHINE

Maestro connect reports and KPIs provide an indepth analysis of production results, enabling you to know your machine's performance in detail.

OEE: WHY IT'S IMPORTANT TO

The Overall Equipment Efficiency Indicator (OEE) allows you to monitor the three variables: **Availability, Performance and Quality.** By doing so, you'll be able to detect the lower one and act on it: the performance of your machine will be the highest ever.

CONSOLLE EYE-M

CONSOLLE EYE-CMS

Simple, linear and elegant design with "full-screen" effect. entered horizontal lines are rendered brighter with LED.

ENERGY SAVING

SAV ERGY LOWER CONSUMPTION = LOWER COSTS

Sav€nergy allows the use of power only when it is required, making things operate only when they are really necessary.

It means the machine automatically enters "stand-by" mode when there are no panels to be machined at any particular time. Year saving up to 10% (optional).

COMPANY WITH QUALITY SYSTEM CERTIFIED BY DNV **ISO 9001**

The technical data can vary according to the requested machine composition. In this catalogue, machines are shown with options. The company reserves the right to modify Technical Data without prior notice; the modifications do not influence the safety foreseen by the CE Norms.

Maximum noise levels measured according to the operating conditions established by EN 1870-13:2012 Acoustic pressure in process 85 dbA (measured according to EN ISO 11202:2010, uncertainty K = 4 dB) Acoustic power in process 103 dbA (measured according to EN ISO 3746:2010, uncertainty K = 4 dB)

Even if there is a correlation between above mentioned "conventional" noise emission values and average levels of personal exposure of operators over eight hours, these last also depend on the real operating conditions, duration of exposure, acoustic conditions of the working environment and presence of further noise sources, this means the number of machines and other adjacent processes.

INTEGRATED SOLUTIONS

FLEXSTORE ELR STORAGE FULLY INTEGRATED IN THE BEAM SAWS: OPTIMISING HAS NEVER BEEN SO EASY

Flexstore elr is the CMS solution for the **needs of companies making items to order** with "just-in-time" production: processing orders quickly, keeping costs down and high quality and productivity standards.

flexstore elr is the automatic storage system which is able to serve beam saws, guaranteeing precision, high component quality and great reliability.

The excellent materials management permits high productivity and flexible machining.

Ensure:

- material savings thanks to management of material remaining after machining
- maximum flexibility for multi-function cells
- optimised material management in the production process: less space occupied, without compromising on efficiency
- reduced risk of damage to material thanks to the absence of sliding movements
- machines with integrated production process
- reduced order execution times

SECURE AND PRECISE PANELS TRANSFER.

The suction cup arm automatically adapts to the different lengths and widths of the panels to be picked up.
